

Divine COFFEE

more than just coffee...

DCS-2

The art of
espresso coffee

Proven technology, speed and efficiency

Instant ingredients remain popular in many parts of the world, not least because of their long shelf life but also because of their flexibility of use. Quick, uncomplicated and long-lasting. These words are characteristic of the Bolero series.

Simply choose your favourite beverage and the DCS delivers a cup of coffee, cappuccino or caffè latte in next to no time. Make sure to choose the coffee strength and size on the screen first before making the selection. Otherwise the drink will be in your cup before you know, it's that quick!

The separate manual outlet provides hot water for tea.

Bolero suits many locations

With several models in the range, there is a DCS instant machine for every situation. Maintenance is uncomplicated and efficient. The touchscreen and design are fully in line with the latest standards and perfectly complement any interior.

Enjoy the benefits

- Quick and user-friendly
- Proven technology
- Made from sturdy high-quality materials such as stainless steel and BPA-free plastics
- Hot water from a separate outlet
- Coffee strength and size (S/M/L) can be selected on-screen
- Eco mode and boiler isolation for reduced energy consumption
- Uncomplicated rinsing and descaling programmes
- Patented mixing systems which greatly reduce any build-up of ingredients
- Transparent canisters make refilling easy
- Day and cumulative counters
- Various programmable settings to optimise the drinks of your choice

Cashless vending

The new series can be adapted to accept contactless payment or an inserted card. An MDB service set is needed to connect the machine with the online (payment) system. Connectivity offers many opportunities, for example to plan routing processes more efficiently and reduce machine downtime. Ask about telemetry and other options.

DCS-4
with hot water outlet

Up to 3 coffee specialties

The small Bolero model is available with one canister or two canisters. The instant canisters are transparent, so it is easy to check whether refilling is necessary.

DCS-1

The DCS-1 features one large instant canister. Thus this model serves one hot beverage, for example hot chocolate or coffee. Note that we offer two models: with and without hot water. The separate hot water tap provides hot water for tea.

DCS-2

With two canisters, you can fill one canister with instant coffee and the other with topping (milk powder). This allows you to serve coffee specialties such as cappuccino, caffè latte and latte macchiato. The DCS-2 is also available with and without the additional hot water tap.

Up to 36 hot beverages

Would you like to expand the range of beverages? Then opt for the wide model. This model is available with three or four canisters, so you can offer a wider range of hot drinks. Hot water comes from the separate outlet.

If you add cocoa you can extend the coffee specialties with hot beverages such as moccachino, espresschoc and espresso-choc.

The display offers a maximum of four screens offering a maximum of nine beverages per screen: 36 drinks in total.

DCS-4

The DCS-3 holds four instant ingredients.
