D7 Hot-Tap Specification

The Hot-Tap

- Chrome faucet with electronic controls
- Touch control dispensing taps
- Flashing indicator light when heating
- Hot water safety tap
- Dispensing height of 200mm.

Under sink system

The D7 hot-tap provides hot and ambient water as standard with the option to connect an under sink chiller creating a boiling & ambient all in one hot-tap.

The D7 atmospheric boiler includes a powerful 2kW SUS316 ring type heating element with a large heating area and fast heat conduction. The chiller unit is a compressor cooler with a static fan assisted condenser. It is recommended that the under sink base unit allows 100mm ventilation space. An expansion chamber absorbs the steam/water pressure created during boiling and reduces the risk of drips of water or steam from the tap. It is nevertheless recommended to mount the D7 hot-tap over a sink or drip tray.

Scale Management

All boiling water units have to manage scale to perform at their best. The D7 has two separate mains water inlets allow for the installation of a scale removal filter on the boiler inlet and a much more cost-effective taste, odour and turbidity carbon block filter on the ambient/ chilled side.

We recommend that all D7 hot-taps are fitted with our top of the range IEN* scale prevention filters.

| Hourly output | | | Dimensions (mm) | Temp |
|---------------|------------|---------|-----------------------------|----------|
| Hot | Ambient | Chilled | | |
| | Indefinite | | | |
| 14 Ltrs | | | Boiler 329h, 220w, 352d | Max |
| | | 8 Ltrs | Chiller 265h, 200w, 380d | 6 - 10°C |
