

## STEPS FOR USING YOUR WATER DISPENSER SAFELY

### WE RECOMMEND THAT YOU FOLLOW THESE STEPS TO KEEP YOUR BUSINESS HYDRATED SAFELY

- Regularly clean your water dispensers exterior, taps and dispensing area using food-safe antibacterial spray or wipes.
- Empty the drip trap regularly and clean with hot soapy water.
- Ensure you observe 2 metre social rules, by only allowing one person to use the dispenser at a time and keeping 2 meters away from each other if queuing for water.
- Ensure you thoroughly wash your hands or disinfect them before using the water dispenser. We recommend having hand sanitiser at each water station.
- Ensure that reusable bottles or cups are thoroughly cleaned prior to using the dispenser.
- Avoid the receptacle having any direct contact with the dispenser.
- Ask all users to avoid touching the dispenser unless necessary.

---

#### Customer Poster

We have produced a poster for you to print and put up next to your water dispenser as a safety reminder to users.

#### Watercoolers Europe Advice

We also recommend that you read the Watercoolers Europe Hygiene & Safety information and guidelines on the restart of water coolers after shutdown which we can provide.

#### Dispenser Cleaning Supplies

We are able to supply:

- 3% peroxide in 100ml spray bottles which is food safe and ideal for cleaning the exterior of the dispensers, dispensing area and taps.
- Sanitisation paper roll.

Please contact us for pricing.
