## Safe, hygienic technology.

Prioritising safety and hygiene, Porpoise has an exceptionally shallow, surface-mounted, single-case design, minimising the risk of misuse and self-harm. Powered by our exclusive compact ProCore® system, Porpoise delivers the ultimate in hygiene and performance, without compromising on safety. The integrated DryChill®, airless, rapid cooling system reduces the risk of contamination, ensuring every glass delivers consistently chilled, great-tasting, freshly-filtered water.

---

## Environmentally conscious design.

Designed and built in the UK in our zero-to-landfill facility, Porpoise benefits from a reduced carbon footprint and nearshored supply chain. With both hot and chilled water options, Porpoise combines energy-efficient technologies with eco-refrigerant cooling and recyclable components for a sustainable, safe approach to fresh, filtered water.

---

## Confidently clean water.

Totality® is our 5-step methodology to achieving clean, healthier, premium water. Providing hygiene assurance in every pour, carbonless filtration reduces sediment and microplastics whilst maintaining efficient chlorine levels, for freshly-filtered water that is safe to drink.

Integrated Viovandt® enhanced UV-C purification utilises ultraviolet LED technology for low-maintenance, eco-friendly and chemical-free sterilisation with high germicidal efficacy to reduce waterborne bacteria and viruses.

---

## Self-service water for challenging environments.

Diligently designed for user safety, the Porpoise features a smooth, shallow profile with both robust and vandal-proof qualities. The easy-to-clean, durable Fynil® finish utilises antimicrobial silver-ion touch panel protection, for complete hygiene confidence in communal areas. Easy to install over a sink, Porpoise allows controlled access to hot and chilled drinking water in even the most challenging environments.

Superior safety  
with pioneering  
ligature-resistant  
drinking water.

Safety in every pour.
